Conservação de espécies marinhas protegidas em Portugal Continental

Conservation of marine protected species in Continental Portugal

2011-2017

LIFE MARPRO | Conservação
de espécies marinhas
protegidas em Portugal
continental

O Caso: Boas Práticas de
Policy Uptake

Catarina Eira, catarina.eira@ua.pt

LIFE MARPRO | Conservação de espécies marinhas protegidas em Portugal continental

**Project
LIFE
MARPRO
2011 – 2017**

Co-financiado por:

universidade de aveiro
departamento de biologia

Parceiros:

Instituto português do
mar e da atmosfera

Sociedade Portuguesa
para o Estudo dos Aves

Com o apoio de:

LIFE MARPRO | Conservação de espécies marinhas protegidas em Portugal continental

Contributions to the Natura 2000 network in the marine environment

European network
of protected areas

Protection of
threatened
species and
habitats in
Europe

Habitats Directive:

**Sites of
Community
Importance
(SCIs)**

Special Areas
of
Conservation
(SACs) /
ZECs

Birds Directive:

Special
Protection
Areas (SPAs)
/ ZPEs

Aim at:

achieving
**Favorable
Conservation
Status** for the
EU's most
vulnerable
habitats and
species.

LIFE MARPRO | Conservação de espécies marinhas protegidas em Portugal continental

Contributions to the Natura 2000 network in the marine environment

European network
of protected areas

Habitats Directive:

Birds Directive:

Aim at:

Boto
(Phocoena phocoena)
Harbour porpoise

Roaz
(Tursiops truncatus)
Bottlenose dolphin

Pardela-balear
(Puffinus mauretanicus)
Balearic shearwater

A black dolphin is shown swimming in the ocean, its dark body contrasting with the lighter water. The dolphin is positioned in the lower-left quadrant of the slide, partially submerged. The background consists of the ocean's surface with gentle ripples.

The actions developed within
the LIFE+ MarPro project
focused on:

- 1** finding the best ways to estimate the abundance of target species
- 2** characterising the mortality of target species
- 3.** finding ways to reduce mortality in cooperation with fishers
- 4** increase public awareness about the conservation of marine species and about project results

Three Concrete Conservation Actions were included in project LIFE+ MarPro:

Implementation of **Good Practice** Manuals for each fishing gear type

Implementation of **mitigation measures** in fishing gears

Improvement of **stranding networks and rehabilitation of marine animals** in mainland Portugal

1 new SCIs ? (Habitats Directive)

How do we define pSCIs in the marine environment?

Guidelines for defining Natura 2000 sites in the marine environment.

Population abundance and density in the pSCI in relation to national population.

1 new SCIs ? (Habitats Directive)

How do we define pSCIs in the marine environment?

Guidelines for defining Natura 2000 sites in the marine environment.

Population abundance and density in the pSCI in relation to national population.

Sightings of Harbour porpoises aerial survey, September 2023

Marine Protected Areas

and Management Plans for Cetaceans and Seabirds

WORKSHOP

Cais Criativo da Costa Nova | 4 & 5 december 2017 | Ilhavo, Aveiro - Portugal | marprolife.org

With the support of:

POLICY UPTAKE GOOD PRACTICES

Long-term benefits of the project

The project allowed Portugal to:

- increase the NATURA 2000 network

ZPE Aveiro/Nazaré
ZPE Cabo Raso
(Decreto Regulamentar n.º17/2015)

alargamento
ZPE Cabo Espichel
ZPE Costa Sudoeste
(D.L. n.º 204/2015)

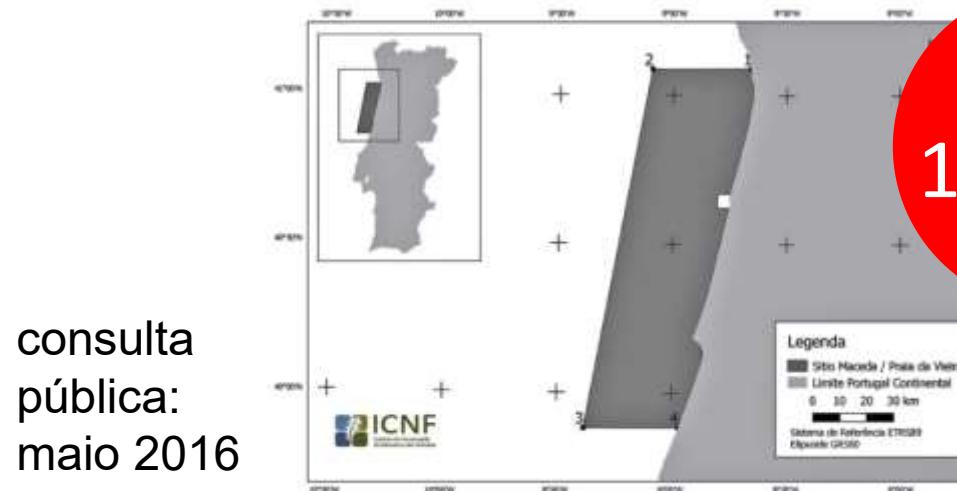

POLICY UPTAKE GOOD PRACTICES

Long-term benefits of the project

The project allowed Portugal to:

- increase the NATURA 2000 network
SITE Maceda—Praia da Vieira
(PTCON0063) legally approved in 2019

RCM
17/2019

PG
Portaria
201/2019

POLICY UPTAKE GOOD PRACTICES

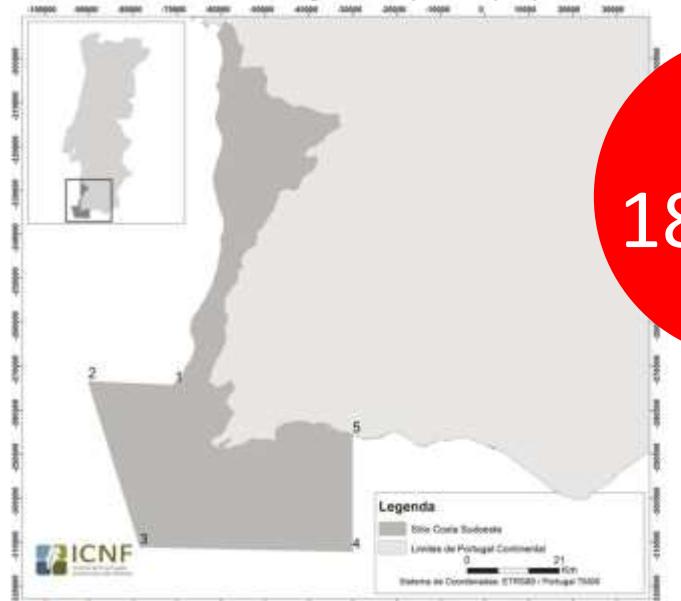

Long-term benefits of the project

The project allowed Portugal to:

- increase the NATURA 2000 network

By enlarging the marine area of SITE Costa Sudoeste (PTCON0012) legally approved in 2019

RCM
18/2019

PG
Portaria
201/2019

POLICY UPTAKE GOOD PRACTICES

Long-term benefits of the project

Por razões externas ao projeto,
não foi possível concretizar a aprovação:

- pSIC “Costa de Setúbal” **X**
- alargamento do SIC “Estuário do Sado” **X**

POLICY UPTAKE GOOD PRACTICES

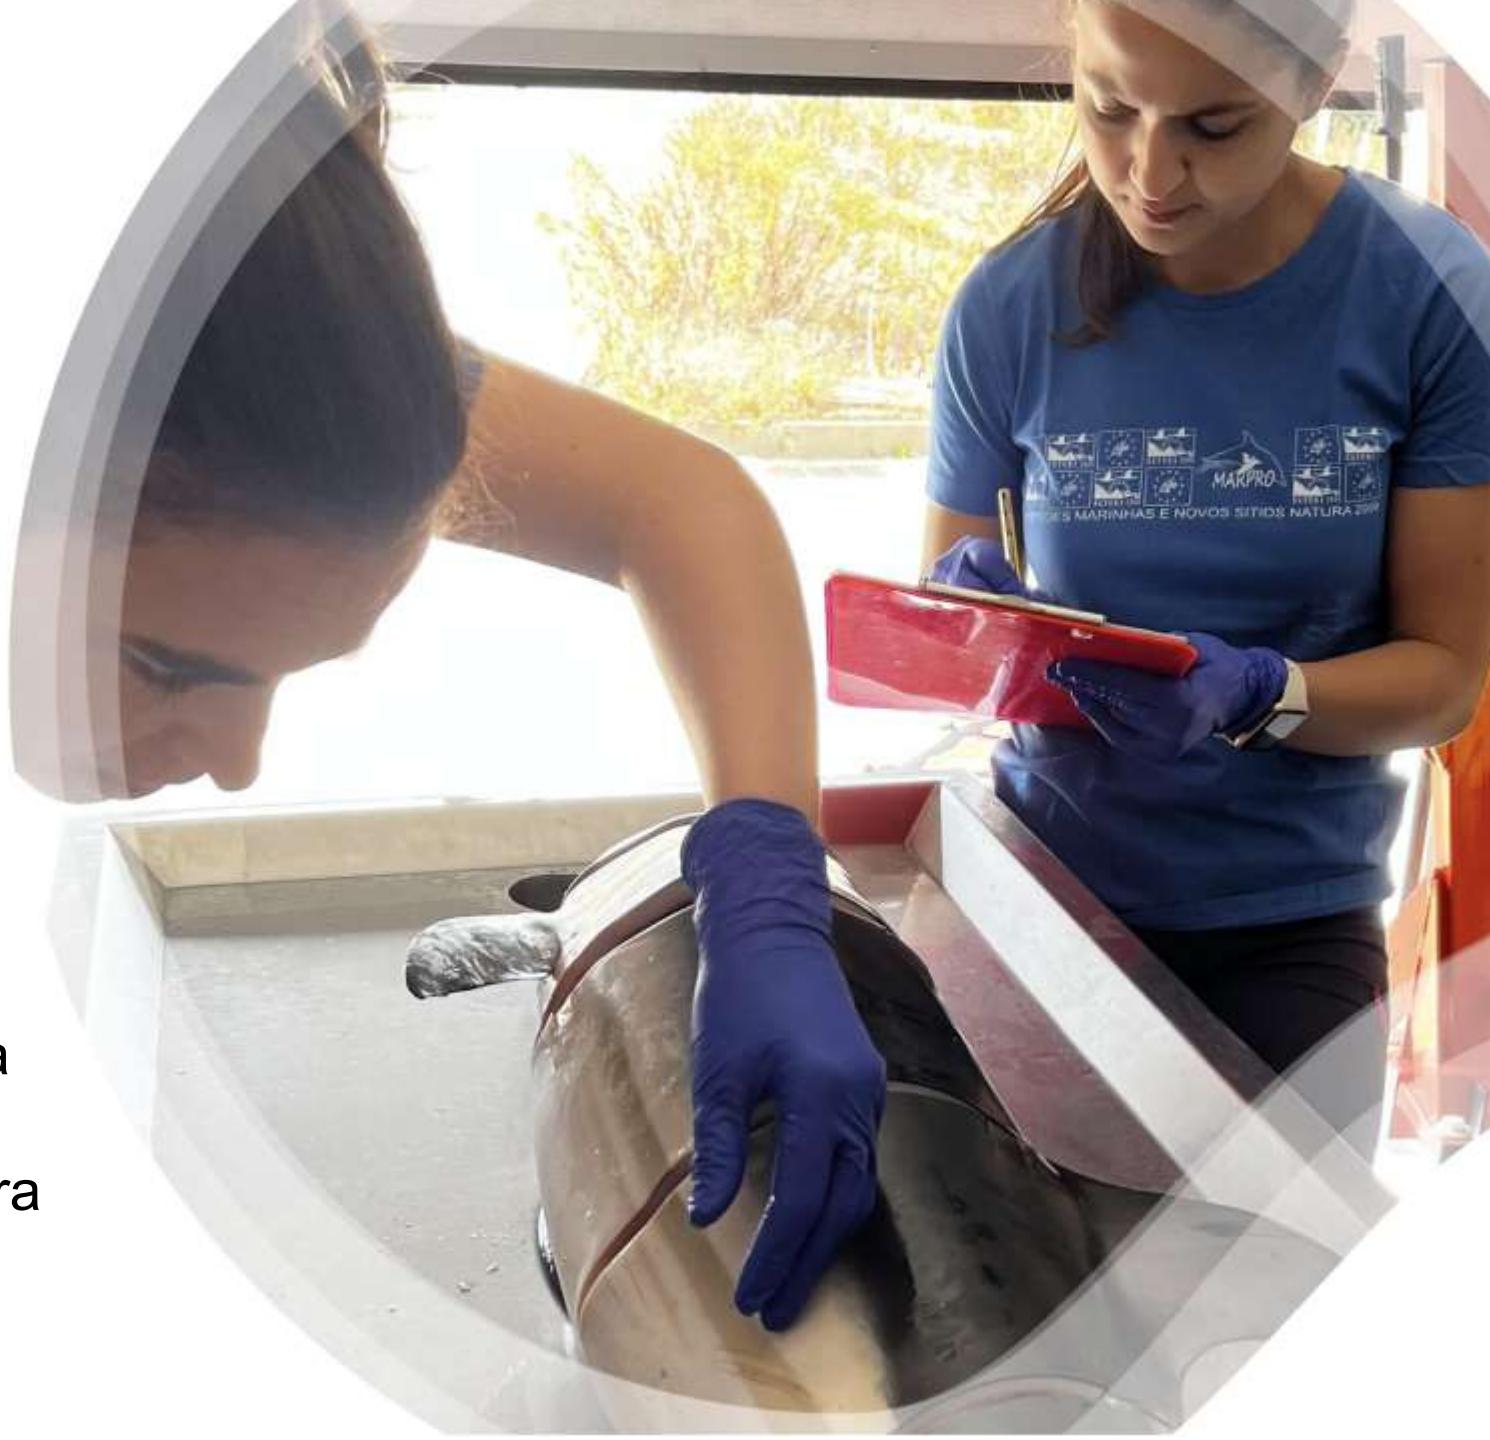

Long-term benefits of the project

Estimating fisheries bycatch from strandings

Outros resultados

- Apoio à rede de arrojamentos, incluindo através dos equipamentos adquiridos, ainda hoje utilizados;
- Medidas de mitigação de captura acidental, Manuais de Boas Práticas e Ensaios de Boas Práticas

POLICY UPTAKE GOOD PRACTICES

Long-term benefits of the project

Outros resultados

- Promoção, em termos legislativos, da utilização de medidas de mitigação na Arte-Xávega, assegurando assim, os esforços para garantir, a longo prazo, a redução da mortalidade do Boto;

POLICY UPTAKE GOOD PRACTICES

Long-term benefits of the project

Outros resultados

- Formação de técnicos, pescadores, autoridades (GNR, Bombeiros, Proteção Civil, Polícia Marítima) e outros utilizadores do meio marinho para deteção e alerta de avistamentos

Ainda hoje estas entidades dão alertas, sempre que se justifica.

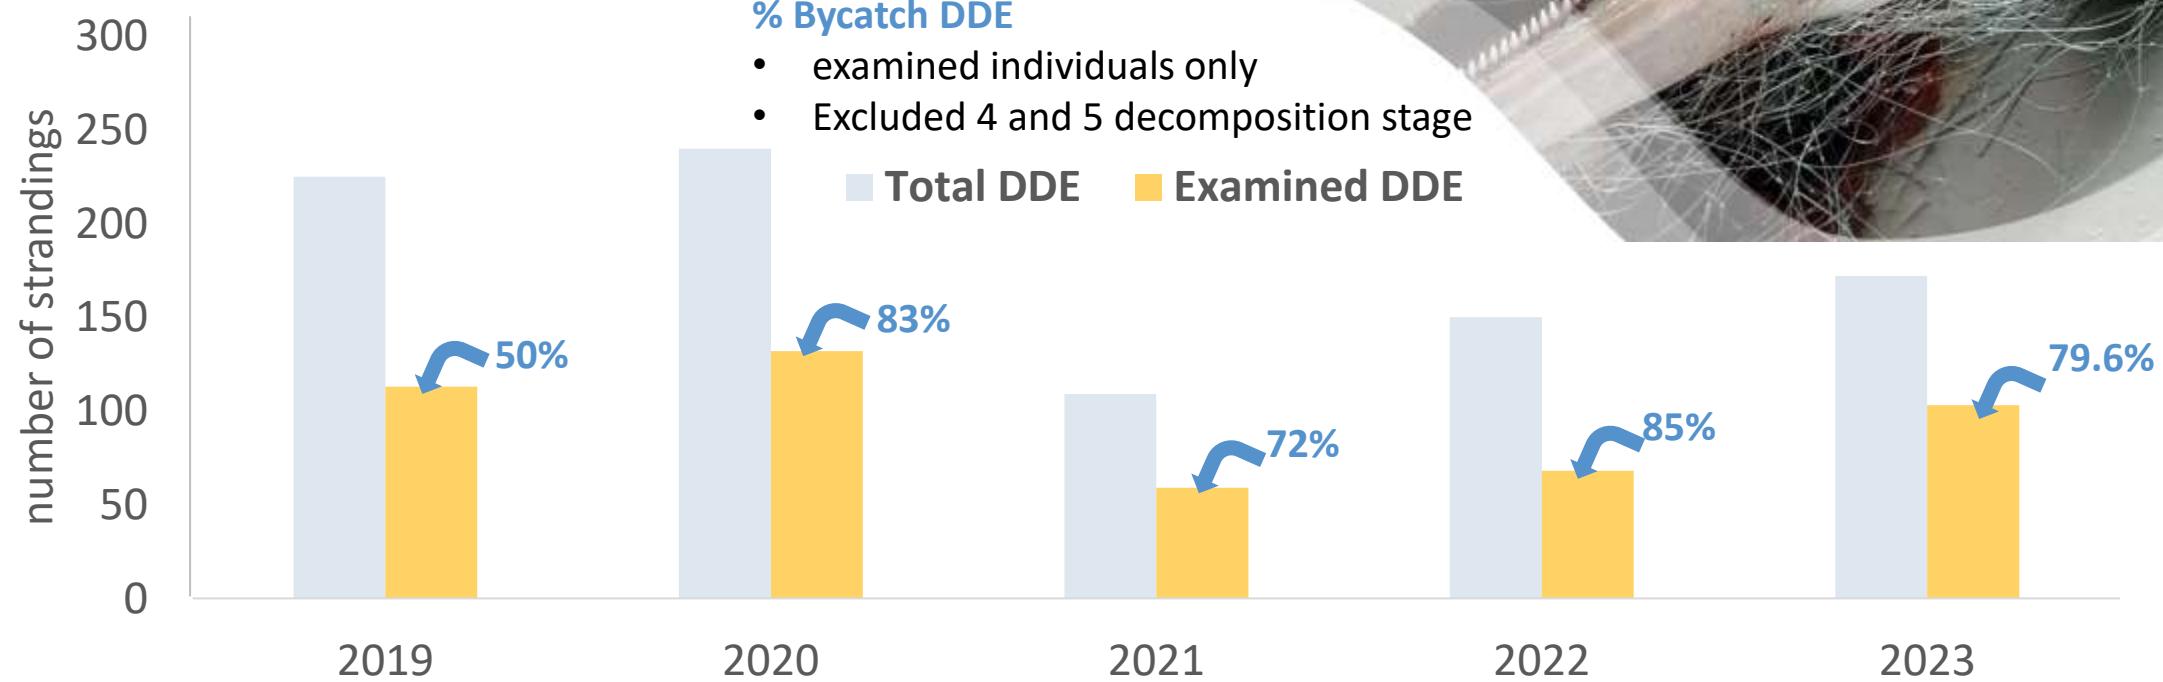

POLICY UPTAKE GOOD PRACTICES

Long-term benefits of the project

Estimating fisheries bycatch from strandings

POLICY UPTAKE GOOD PRACTICES

Long-term benefits of the project

The project allowed Portugal to:

- report reliable information on several cetacean species for the first time in the 2012 Normalized Data Form, used to monitor the application of the **Habitats Directive**.
- report again on the same data form, in 2019, on the evolution of several cetacean populations.
- report on bycatch assessment to the European Commission regulation 812/2004

POLICY UPTAKE GOOD PRACTICES

Long-term benefits of the project

The project optimized:

Census and **fisheries bycatch evaluation** which, if applied as often as necessary, will allow for the long-term monitoring and management of populations in mainland Portugal.

The methods have been optimized in such a way as to produce the best value for money and so that they can be transferred to other areas and other teams.

BENEFÍCIOS DO PROJETO A LONGO PRAZO

Long-term benefits of the project

Marine Animal Rehabilitation and CRAM - ECOMARE

Outros resultados

- Melhorias no Centro de Reabilitação de Animais Marinhos, para maior capacidade de resposta aos impactes das atividades humanas;

BENEFÍCIOS DO PROJETO A LONGO PRAZO
