MAPA ESTRATÉGICO DE RUÍDO 2021 (RNT) – STRATEGIC NOISE MAP 2021 (RNT)

Aeroporto Lisboa | Lisbon Airport – Humberto Delgado (AHD)

ÍNDICE GERAL

1. INTRODUÇÃO	5
2. ENQUADRAMENTO	6
3. MAPAS DE RUÍDO.....	9
4. METODOLOGIA	10
5. DESCRIÇÃO DO AEROPORTO	11
6. OPÇÕES DE CÁLCULO E VALIDAÇÃO DE LONGA DURAÇÃO.....	12
7. CÁLCULO DA POPULAÇÃO EXPOSTA	17
8. ANÁLISE EVOLUTIVA.....	19

GENERAL INDEX

1. INTRODUCTION	5
2. FRAMEWORK	6
3. NOISE MAPS.....	9
4. METHODOLOGY.....	10
5. AIRPORT'S DESCRIPTION.....	11
6. CALCULATION METHODS AND LONG-TERM VALIDATION.....	12
7. EXPOSED POPULATION CALCULUS	17
8. EVOLUTIVE ANALYSIS	19

ÍNDICE DE TABELAS

Tabela 1 - Movimentos simulados, por pista do Aeroporto Humberto Delgado, em 2021	10
Tabela 2 - Quadro dos valores de L_{den} e L_n , em dB(A), registados para o ruído de tráfego aéreo nas Estações de Monitorização de Ruído relativos a 2021.	15
Tabela 3 - Quadro de valores de L_{den} e L_n , em dB(A)-Comparativo dos valores simulados e monitorizados.	15
Tabela 4 - Quadros relativos ao número estimado de pessoas residentes fora das aglomerações urbanas, em toda a área envolvida pelas isófonas consideradas e expostas às diferentes gamas de valores L_{den} e L_n calculadas a 4 metros de altura.....	17
Tabela 5 - Área total (em km ²) e número estimado de habitações e de pessoas residentes expostas a diferentes classes de valores de L_{den} a 4 m altura... ...	18
Tabela 6 - Quadro comparativo de movimentos, alvo de simulação, 2021/2016.....	19
Tabela 7 - Quadro comparativo de população exposta, 2021/2016.	19
Tabela 8 - Quadro comparativo de níveis sonoros nas estações de monitorização, 2021/2016.....	19

TABLES INDEX

Table 1 - Simulated movements, by runway at Humberto Delgado Airport, in 2021.....	10
Table 2 - Table of L_{den} and L_n values, in dB(A), recorded for air traffic noise at Noise Monitoring Terminals for 2021.	15
Table 3 - Table of values for L_{den} and L_n , in dB(A)-Comparison of simulated and monitored values. ...	15
Table 4 - Values regarding the estimated number of people living outside the urban agglomerations, in the whole area involved by the noise contours considered and exposed to the different ranges of L_{den} and L_n values calculated at a height of 4 metres.	17
Table 5 - Total area (in km ²) and estimated number of dwellings and resident people exposed to different classes of L_{den} values at a height of 4 metres.	18
Table 6 - Comparative table of movements used in the simulation, 2021/2016	19
Table 7 - Comparative table of exposed population, 2021/2016.	19
Table 8 - Comparative table of sound levels at monitoring stations, 2021/2016.....	20

MAPA ESTRATÉGICO DE RUÍDO 2021 (RNT)– STRATEGIC NOISE MAP 2021 (RNT)

Aeroporto Lisboa | Lisbon Airport – Humberto Delgado (AHD)

1. INTRODUÇÃO

O Mapa Estratégico de Ruído (MER) do Aeroporto Humberto Delgado (AHD), relativo ao ano 2021, foi elaborado pela SCHIU, Engenharia de Vibração e Ruído, Lda., para a ANA, Aeroportos de Portugal, S.A., através da seguinte Equipa Técnica:

- ANA: Jorge Melgueira; Sílvia Pereira.
- SCHIU: Vitor Rosão; André Pires; Alice Ramos; Alexandra Reis.

Este MER foi antecedido pelo MER relativo ao ano de 2016, publicado pela Agência Portuguesa do Ambiente (APA) no seu website (atualmente: <https://apambiente.pt/ar-e-ruido/mapas-estrategicos-de-ruido-git-aereo>).

O presente Resumo Não Técnico (RNT), constitui um documento independente, que resume e “esclarece”, de forma que se procura acessível ao público em geral, o conteúdo de Relatório Técnico mais completo.

1. INTRODUCTION

The Strategic Noise Map (MER) of Humberto Delgado Airport (AHD; Lisbon), for the year 2021, was prepared by SCHIU, Vibration and Noise Engineering, Lda., for ANA, Airports of Portugal, S.A., through the following Technical Team:

- ANA: Jorge Melgueira; Sílvia Pereira.
- SCHIU: Vitor Rosão; André Pires; Alice Ramos; Alexandra Reis.

This MER was preceded by the MER for the year 2016, published by the Portuguese Environment Agency (APA) on its website (currently: <https://apambiente.pt/ar-e-ruido/mapas-estrategicos-de-ruido-git-aereo>).

The following non-technical report presents an independent document which is intended to resume and clarify the Technical Report so that the general audience can have a better understanding of the contents.

MAPA ESTRATÉGICO DE RUÍDO 2021 (RNT) – STRATEGIC NOISE MAP 2021 (RNT)

Aeroporto Lisboa | Lisbon Airport – Humberto Delgado (AHD)

2. ENQUADRAMENTO

Os Mapas Estratégicos de Ruído (MER) estão alicerçados na Diretiva de Ruído Ambiente (END) 2002/49/CE, que obriga à elaboração de MERs. A Diretiva 2002/49/CE (END) foi revista por:

- Regulamento (CE) 1137/2008.
- Diretiva (UE) 2015/996, transposta pelo Decreto-Lei n.º 136-A/2019, que republica o Decreto-Lei n.º 146/2006.
- Regulamento (UE) 2019/1010.
- Regulamento (UE) 2019/1243.
- Diretiva (UE) 2020/367.
- Diretiva Delegada (UE) 2021/1226.
- Os Regulamentos e Diretivas referidas foram traspostos pelo Decreto-Lei n.º 84-A/2022, de 9 de setembro, que corresponde também à 2.ª alteração do Decreto-Lei n.º 146/2006.
- A Portaria n.º 42/2023, de 9 de fevereiro, corresponde ao estabelecido no Artigo 4.º do DL 84-A/2022.

Na Figura 1 apresenta-se, de forma aproximada e para melhor percepção dos níveis sonoros em causa, quais as relações típicas entre os valores dos níveis sonoros e as sensações auditivas em situações comuns.

2. FRAMEWORK

Strategic Noise Maps (MER) are based on the so-called Environmental Noise Directive [(END) Directive 2002/49/EC, which obliges to develop the Noise Maps. The Directive 2002/49/EC was revised by:

- Regulation (EC) 1137/2008.
- Directive (EU) 2015/996, transposed to Portugal by Decree-Law n.º 136-A/2019, which republishes Decree-Law n.º 146/2006.
- Regulation (EU) 2019/1010.
- Regulation (EU) 2019/1243.
- Directive (EU) 2020/367.
- Delegated Directive (EU) 2021/1226.
- The Regulations and Directives mentioned were transposed by Decree-Law n.º 84-A/2022, of 9 September, which also corresponds to the 2nd amendment of Decree-Law no. 146/2006.
- Ordinance n.º 42/2023, of 9 February, corresponds to the provisions of Article 4 of DL 84-A/2022.

In order to give a better understanding of the sound levels, in Figure 1 are presented the typical relation between the levels of the sound levels and the associated auditive sensation.

MAPA ESTRATÉGICO DE RUÍDO 2021 (RNT) – STRATEGIC NOISE MAP 2021 (RNT)

Aeroporto Lisboa | Lisbon Airport – Humberto Delgado (AHD)

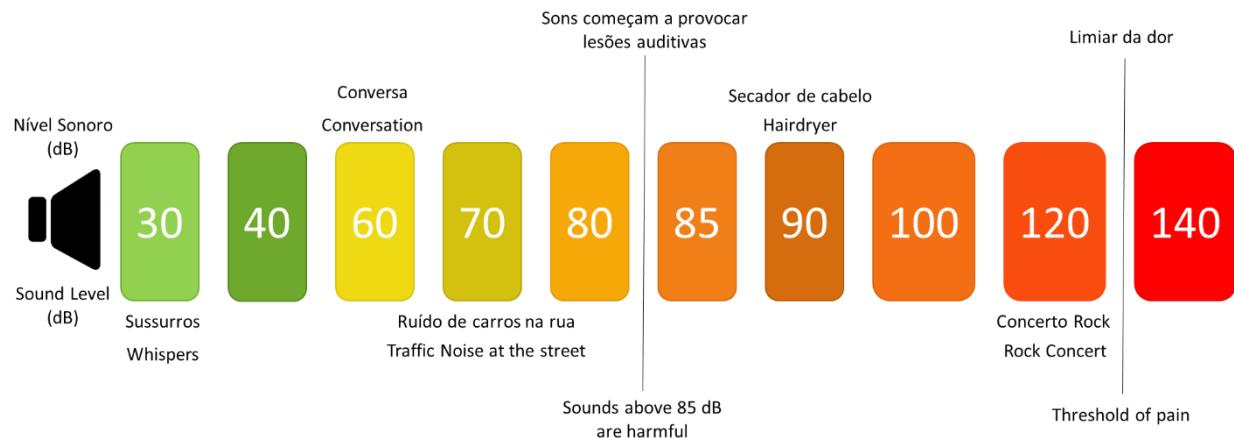

Figura 1 – Níveis típicos de ruído em decibéis (dB).

Figure 1 – Typical Noise levels in decibels (dB).

MAPA ESTRATÉGICO DE RUÍDO 2021 (RNT) – STRATEGIC NOISE MAP 2021 (RNT)

Aeroporto Lisboa | Lisbon Airport – Humberto Delgado (AHD)

Conforme estabelecido, são apresentados Mapas de Ruído para os seguintes dois parâmetros:

- Nível sonoro dia-entardecer-noite: L_{den} .
- Nível sonoro noturno (23h-7h): L_n .

O parâmetro composto L_{den} , é calculado com base em L_n e com base em:

- Nível sonoro diurno (7h-20h): L_d .
- Nível sonoro do entardecer (20h-23h): L_e .

As definições dos parâmetros encontram-se no Decreto-Lei n.º 9/2007 [Regulamento gera do Ruído (RGR)], correspondendo a médias anuais, sendo que o parâmetro L_{den} corresponde a uma “média” de 24h – representativa de um ano - dos níveis sonoros, em que é dado mais peso (5 dB) ao período do entardecer e ainda mais peso (10dB) ao período noturno.

Os valores limite em Portugal, a cumprir nos Recetores Sensíveis: (RGR: “*o edifício habitacional, escolar, hospitalar ou similar ou espaço de lazer, com utilização humana*”) são, para um Grande Infraestrutura de Transporte Aéreo (GITa; mais de 50000 movimentos por ano), de acordo com a alíneas a) e c) do Artigo 11.º do RGR:

- $L_{den} \leq 65$ dB(A).
- $L_n \leq 55$ dB(A).

As it was previously established, the Noise Maps are presented for the following noise indicators:

- Day-evening-night Noise Level: L_{den} .
- Night Noise Level (23h-7h): L_n .

The composed noise indicator L_{den} is based on the indicator L_n as well as the following noise indicators:

- Day Noise Level (7h-20h): L_d .
- Evening Noise Level (20h- 23h): L_e .

The definitions of the parameters are found in the Decree-Law no. 9/2007 [Portuguese General Noise Regulation (RGR)], corresponding to annual averages, where the parameter L_{den} corresponds to a 24h "average" - representative of one year - of the sound levels, in which more ponderation (5 dB) is given to the evening period and even more (10dB) to the night period.

The limit values in Portugal, to be complied in the Sensitive Receivers: (RGR: “*the residential building, school, hospital or similar or leisure space, with human use*”) are, for a Major Airport (GITa; more than 50000 movements per year), in accordance with paragraphs a) and c) of Article 11 of the RGR:

- $L_{den} \leq 65$ dB(A).
- $L_n \leq 55$ dB(A).

MAPA ESTRATÉGICO DE RUÍDO 2021 (RNT) – STRATEGIC NOISE MAP 2021 (RNT)

Aeroporto Lisboa | Lisbon Airport – Humberto Delgado (AHD)

3. MAPAS DE RUÍDO

Apresentam-se no Anexo 3 os Mapas de Ruído para o Aeroporto Humberto Delgado (AHD), em Lisboa, respeitantes aos indicadores L_{den} e L_n , para o ano de 2021.

Adicionalmente, é igualmente apresentada a marcação das isófonas $L_n = 53$ dB(A) e $L_{den} = 63$ dB(A).

3. NOISE MAPS

The Noise Maps for Humberto Delgado Airport (AHD), in Lisbon, for the year 2021 are shown in Annex 3, with regards to the indicators L_{den} and L_n .

Additionally, the noise contour lines $L_n = 53$ dB(A) and $L_{den} = 63$ dB(A) are also presented.

MAPA ESTRATÉGICO DE RUÍDO 2021 (RNT) – STRATEGIC NOISE MAP 2021 (RNT)

Aeroporto Lisboa | Lisbon Airport – Humberto Delgado (AHD)

4. METODOLOGIA

Os Mapas de Ruído anteriores são calculados com o programa de modelação: “AEDT- Aviation Environmental Design Tool, version 3e (May 2022)”, desenvolvido pela FAA (USA Federal Aviation Administration), compatível com:

- a) CNOSSOS-EU;
- b) Documentos de suporte à aplicação do método:
 - a. “Report on Standard Method of Computing Noise Contours around Civil Airports”;
 - b. International Civil Aviation Organization (ICAO) Doc 9911 (2nd Edition);
 - c. “Recommended Method for Computing Noise Contours Around Airports”.

Os mapas de Ruído são calculados de acordo com a situação acústica relativa aos movimentos ocorridos no ano de 2021, resumidos na seguinte tabela:

4. METHDODOLOGY

The noise maps are calculated with the Modelling program: “AEDT- Aviation Environmental Design Tool, version 3e (May 2022)”, developed by the FAA (USA *Federal Aviation Administration*), which is compatible with:

- a) CNOSSOS-EU;
- b) Documents supporting the application of the method:
 - a. “Report on Standard Method of Computing Noise Contours around Civil Airports”;
 - b. “International Civil Aviation Organization (ICAO) Doc 9911 (2nd Edition)”;
 - c. “Recommended Method for Computing Noise Contours Around Airports”.

Noise maps are calculated according to the acoustic situation concerning the movements that occurred in 2021 that are resumed in the following table:

Tabela 1 - Movimentos simulados, por pista do Aeroporto Humberto Delgado, em 2021

Table 1 - Simulated movements, by runway at Humberto Delgado Airport, in 2021

Operação Operation	Pista Runway	Dia Day	Entardecer Evening	Noite Night
Aterragens Arrivals (A)	02	29544	6626	7524
	20	9363	1659	1818
Total Parcial Parcial Total (A)		38907	8285	9342
Descolagens Departures (D)	02	31901	7454	4395
	20	9694	1900	1092
Total Parcial Parcial Total (D)		41595	9354	5487
Total 2021		80502	17639	14829

MAPA ESTRATÉGICO DE RUÍDO 2021 (RNT) – STRATEGIC NOISE MAP 2021

Aeroporto Lisboa | Lisbon Airport – Humberto Delgado (AHD)

5. DESCRIÇÃO DO AEROPORTO

O Aeroporto Humberto Delgado situa-se na Portela de Sacavém, a 7 km na direção Noroeste do centro da cidade de Lisboa, no limite dos concelhos de Lisboa e Loures, abrangendo as freguesias de Olivais (concelho de Lisboa) e Camarate (concelho de Loures).

Dada a sua integração no meio urbano, toda a envolvente do Aeroporto é caracterizada por uma elevada densidade populacional, embora se verifique uma densidade de ocupação mais elevada a este e a sul. Nas envolventes próximas - noroeste e este / nordeste - observam-se ainda, em alguma extensão, áreas de utilização industrial, nomeadamente armazéns e pequenas unidades fabris. A vertente oeste encontra-se marcada pela urbanização da Alta de Lisboa.

Refira-se ainda a proximidade do Instituto Ricardo Jorge, do Centro Hospitalar Psiquiátrico de Lisboa, do Hospital de Santa Maria, e da Cidade Universitária a Sudoeste do Aeroporto, sendo que estes três últimos se encontram no alinhamento da Pista 02-20.

Em termos de acessibilidades viárias, o Aeroporto localiza-se junto da 2^a Circular de Lisboa, e Eixo Norte-Sul, próximo das ligações com a A1 – Autoestrada do Norte e com a A12 – Ponte Vasco da Gama, o que permite a sua rápida ligação ao IP1 para norte e para sul.

5. AIRPORT'S DESCRIPTION

Humberto Delgado Airport is located in Portela de Sacavém, 7 km northwest from the centre of Lisbon, on the edge of the municipalities of Lisbon and Loures, covering the parishes of Olivais (municipality of Lisbon) and Camarate (municipality of Loures).

Given its integration into the urban environment, the entire surroundings of the Airport are characterised by a high population density, although there is a higher occupancy density to the East and South. There is some extension of industrial activity, in the neighbouring Northwest and East/Northeast areas, namely warehouses and small manufacturing units. The west side is outlined by the Alta de Lisboa neighbourhood.

It is also worth mentioning the proximity of the Ricardo Jorge Institute (Portuguese health laboratory), the Lisbon Psychiatric Hospital Centre, the Santa Maria Hospital, and the University City to the southwest of the Airport. The latter three areas are located along the lane 02-20.

In terms of road accessibility, the Airport is located next to two important road networks, the 2.^aCircular de Lisboa and the Eixo Norte-Sul, and it is in the proximity of A1 – North motorway and the A12 motorway – Vasco da Gama Bridge, allowing therefore an easy and quick access from the airport to the IP1 highway, both Northbound and Southbound

6. OPÇÕES DE CÁLCULO E VALIDAÇÃO DE LONGA DURAÇÃO

Cumprindo as indicações do capítulo “2.7.26 Cálculo e aperfeiçoamento da grelha normalizada” do Decreto-Lei n.º 136-A/2019”, foi verificado que uma grelha de 50x50 m possui rigor semelhante (isolinha exatamente no mesmo sítio) a uma grelha de 10x10 m ou mesmo 5x5m, para as partes “retas” das isolinhas, enquanto nas zonas de curvatura das isolinhas, foi necessário alterar a grelha base de 50x50 m ($\Delta G = 50$ m) para 5x5 m ($\Delta G = 5$ m) para um maior detalhe ($\Delta L \leq 1$ dB).

Para efeitos de validação dos modelos utilizados na produção dos Mapas de Ruído, o Aeroporto Humberto Delgado dispõe de uma rede fixa de 7 estações de monitorização contínua de ruído. Estas encontram-se distribuídas pelos corredores de aproximação às pistas permitindo monitorizar com rigor a operação das aeronaves que utilizam o Aeroporto. As estações de monitorização contínua estão localizadas nas seguintes coordenadas:

- 1- Pirescoxe (38°50'3.96"N 9° 5'23.43"W)
- 2- Alcântara (38°42'29.10"N 9°10'34.02"W)
- 3- Camarate (38°48'23.66"N 9° 7'20.37"W)
- 4- Campolide (38°44'0.34"N 9° 9'33.67"W)
- 5- Cidade Universitária (38°44'55.03"N 9° 9'14.95"W)
- 7- Aeroporto (38°47'26.02"N 9° 8'5.15"W)

6. CALCULATION METHODS AND LONG-TERM VALIDATION

Complying with the indications in chapter “2.7.26 Calculation and improvement of the standardized grid” of Decree-Law n.º 136-A/2019”, it was verified that a grid of 50x50 m has similar accuracy (isolines in exactly the same place) to a grid of 10x10 m or even 5x5m, for the “straight” parts of the isolines , while in the zones of curvature of the isolines, it was necessary to change the base grid from 50x50 m ($\Delta G = 50$ m) to 5x5 m ($\Delta G = 5$ m) for greater detail ($\Delta L \leq 1$ dB)

For the purpose of validating the models used in the production of the Noise Maps, Humberto Delgado Airport has a fixed network of 7 continuous Noise Monitoring Terminals. These are distributed along the runway approach corridors, allowing for the accurate monitoring of the operation of aircraft using the Airport. The Noise Monitoring Terminals are located in the following coordinates:

- 1- Pirescoxe (38°50'3.96"N 9° 5'23.43"W)
- 2- Alcântara (38°42'29.10"N 9°10'34.02"W)
- 3- Camarate (38°48'23.66"N 9° 7'20.37"W)
- 4- Campolide (38°44'0.34"N 9° 9'33.67"W)
- 5- Cidade Universitária (38°44'55.03"N 9° 9'14.95"W)
- 7- Aeroporto (38°47'26.02"N 9° 8'5.15"W)

MAPA ESTRATÉGICO DE RUÍDO 2021 (RNT) – STRATEGIC NOISE MAP 2021

Aeroporto Lisboa | Lisbon Airport – Humberto Delgado (AHD)

Nestas estações foram recolhidos os valores sendo estes posteriormente comparados aos valores simulados para os mesmos locais.

In the Noise Monitoring Terminals mentioned above, the noise values were collected and then compared to the simulated values for the same locations.

Figura 2 - Localização das EMR's

Figure 2 - Location of EMR's

b. Tempos de medição:

Os tempos de medição, como já foi referido no ponto anterior, são recolhidos e consolidados nas EMR's com intervalos de 1s em períodos contínuos de 24 horas.

c. Altura dos pontos de medição:

A altura do ponto de medição está fixada pela altura do mastro onde está instalado o microfone e é aproximadamente de 6 metros a partir da altura do solo.

d. Valores de L_{den} e L_n medidos nas Estações de Monitorização de Ruído:

Apresentam-se no quadro seguinte, os valores de L_{den} e L_n , em dB(A), medidos nas Estações de Monitorização de Ruído para o período em referência.

b. Measuring times:

The measurement times, as mentioned above, are collected and consolidated in the EMR's with intervals of 1s in continuous periods of 24 hours.

c. Height of measuring points:

The height of the measurement point is fixed by the height of the pole where the microphone is installed at approximately 6 meters from ground level.

d. L_{den} and L_n values measured at the Noise Monitoring Stations:

The values of L_{den} and L_n , in dB(A), measured at the Noise Monitoring Stations for the reference period are shown in the following table.

MAPA ESTRATÉGICO DE RUÍDO 2021 (RNT) – STRATEGIC NOISE MAP 2021

Aeroporto Lisboa | Lisbon Airport – Humberto Delgado (AHD)

Tabela 2 - Quadro dos valores de L_{den} e L_n , em dB(A), registados para o ruído de tráfego aéreo nas Estações de Monitorização de Ruído relativos a 2021.

Table 2 - Table of L_{den} and L_n values, in dB(A), recorded for air traffic noise at Noise Monitoring Terminals for 2021.

Estação de Monitorização Monitoring Station	L_{den} [dB(A)]	L_n [dB(A)]
(1) Pirescoxe	54,0	45,1
(2) Alcântara	58,3	50,4
(3) Camarate	65,4	57,1
(4) Campolide	62,0	53,9
(5) Cidade Universitária	67,1	59,1
(7) Aeroporto	66,6	58,2

Nota: A EMR (7) Aeroporto não é representativa para efeitos de exposição da população, pois encontra-se localizada nas instalações do aeroporto. Neste contexto, é maioritariamente utilizada para efeitos de aferição interna do Sistema.

Note: EMR (7) Aeroporto is not representative for the purpose of the population exposure, as it is located on the airport premises. In this context, it is mostly used for the purposes of internal measurement of the System

Apresenta-se na Tabela seguinte a comparação dos valores simulados pelo Mapa de Ruído, nos pontos de Monitorização, para a altura considerada nos Mapas de Ruído, com os valores medidos nesses pontos e apresentados no quadro anterior.

Tabela 3 - Quadro de valores de L_{den} e L_n , em dB(A)- Comparativo dos valores simulados e monitorizados.

Table 3 - Table of values for L_{den} and L_n , in dB(A)- Comparison of simulated and monitored values.

Estação de Monitorização Monitoring Station	Valores Simulados Simulated values		Diferencial Simulados - Medidos Differential Simulated - Measured	
	L_{den} [dB(A)]	L_n [dB(A)]	L_{den} [dB(A)]	L_n [dB(A)]
(1) Pirescoxe	59,9	50,0	5,9	4,9
(2) Alcântara	59,6	51,8	1,3	1,3
(3) Camarate	67,5	57,6	2,1	0,5
(4) Campolide	63,4	55,7	1,4	1,8
(5) Cidade Universitária	68,0	60,3	0,9	1,2
(7) Aeroporto	69,8	60,7	3,2	2,5

The following table presents a comparison of the values simulated by the Noise Map, at the Monitoring points, for the height considered in the Noise Maps, with the values measured at those points and presented in the previous table.

A análise do quadro anterior permite verificar que os valores simulados são sempre superiores aos valores medidos – o que coloca o AHD numa posição de segurança – com um desvio médio global de 2,3 dB (2,5 dB para L_{den} e 2,0 dB para L_n).

The analysis of the previous table shows that the simulated values are always higher than the measured values - which puts AHD in a safe position - with an overall average deviation of 2.3 dB (2.5 dB for L_{den} and 2.0 dB for L_n).

MAPA ESTRATÉGICO DE RUÍDO 2021 (RNT) – STRATEGIC NOISE MAP 2021

Aeroporto Lisboa | Lisbon Airport – Humberto Delgado (AHD)

7. CÁLCULO DA POPULAÇÃO EXPOSTA

O cálculo da população exposta foi feito seguindo as recomendações do documento GPRD-2022 (“APA – *Guia de Procedimentos para o Reporte de Dados no Âmbito da Diretiva Ruído Ambiente DF4-8 Mapas Estratégicos de Ruído. Versão 5. Agosto 2022*”), utilizando as informações do CENSOS 2021.

Assim, apresenta-se, nas Tabelas seguintes, a população exposta ao ruído do Aeroporto Humberto Delgado, no ano 2021:

7. EXPOSED POPULATION CALCULUS

The calculation of the exposed population was carried out following the recommendations of the document GPRD-2022 (“APA – *Procedural Guide for Data Reporting under the Environmental Noise Directive DF4-8 Strategic Noise Maps. Version 5. August 2022*”), using the information from the 2021 Portuguese CENSUS.

Thus, taken into account this information, the following Tables show the population exposed to noise at the Humberto Delgado Airport in the year 2021:

Tabela 4 - Quadros relativos ao número estimado de pessoas residentes fora das aglomerações urbanas, em toda a área envolvida pelas isófonas consideradas e expostas às diferentes gamas de valores L_{den} e L_n calculadas a 4 metros de altura.

Table 4 - Values regarding the estimated number of people living outside the urban agglomerations, in the whole area involved by the noise contours considered and exposed to the different ranges of L_{den} and L_n values calculated at a height of 4 metres.

Classes do indicador Indicator classes [dB(A)]	Nº estimado de pessoas residentes Estimated number of residents
55 < L_{den} ≤ 60	47590
60 < L_{den} ≤ 65	24312
65 < L_{den} ≤ 70	6741
70 < L_{den} ≤ 75	839
$L_{den} > 75$	0
-	-
Total	79482

Nota: O nº estimado de pessoas residentes não está arredondado à centena, conforme indicado no novo Guia da APA.

Note: The estimated number of residents is not rounded to the nearest hundred, as indicated in the new APA Guide.

Classes do indicador Indicator classes [dB(A)]	Nº estimado de pessoas residentes Estimated number of residents
45 < L_n ≤ 50	66388
50 < L_n ≤ 55	28364
55 < L_n ≤ 60	7820
60 < L_n ≤ 65	1310
65 < L_n ≤ 70	0
$L_n > 70$	0
Total	103882

MAPA ESTRATÉGICO DE RUÍDO 2021 (RNT) – STRATEGIC NOISE MAP 2021
Aeroporto Lisboa | Lisbon Airport – Humberto Delgado (AHD)

Tabela 5 - Área total (em km²) e número estimado de habitações e de pessoas residentes expostas a diferentes classes de valores de L_{den} a 4 m altura.

Table 5 - Total area (in km²) and estimated number of dwellings and resident people exposed to different classes of L_{den} values at a height of 4 metres.

Classes do indicador Indicator classes [dB(A)]	Área total Total area [km ²]	N.º estimado de habitações/ fogos Estimated n.º of dwellings	N.º estimado de pessoas residentes Estimated n.º of residents
$L_{den} > 75$	0	4	17
$L_{den} > 65$	3	8014	14101
$L_{den} > 55$	37	95304	177048

MAPA ESTRATÉGICO DE RUÍDO 2021 (RNT) – STRATEGIC NOISE MAP 2021

Aeroporto Lisboa | Lisbon Airport – Humberto Delgado (AHD)

8. ANÁLISE EVOLUTIVA

Nos quadros seguintes apresenta-se, o comparativo entre 2021 (valores expostos anteriormente) e 2016 (valores explicitados em seguida), respetivamente para o número de movimentos simulados, para a exposição da população ao ruído e para os níveis sonoros medidos nas estações de monitorização.

8. EVOLUTIVE ANALYSIS

The following tables show the comparison between 2021 (values exposed above) and 2016 (values explained below), respectively for the number of simulated movements, for the exposure of the population to noise and for the sound levels measured at the monitoring stations.

Tabela 6 - Quadro comparativo de movimentos, alvo de simulação, 2021/2016

Table 6 - Comparative table of movements used in the simulation, 2021/2016

Operação Operation	Dia Day (07h-20h)	Entardecer Evening (20h-23h às)	Noite Night (23h-07h)	Total
Total 2021	80453	17634	14821	112908
Total 2016	128930	30606	22612	182148
10log(2021/2016)	≈ -2 dB	≈ -2 dB	≈ -2 dB	≈ -2 dB

Nota: A variação do ruído com a variação do n.º de movimentos ocorre tipicamente numa proporção de $10\log(n)$.

Note: The variation of noise with the variation of the number of movements typically occurs in a proportion of $10\log(n)$.

Tabela 7 - Quadro comparativo de população exposta, 2021/2016.

Table 7 - Comparative table of exposed population, 2021/2016.

Classes do indicador Indicator classes [dB(A)]	Nº estimado de pessoas residentes Estimated n.º of residents	
	2016	2021-2016
55 < L_{den} ≤ 60	65600	-18010
60 < L_{den} ≤ 65	42600	-18288
65 < L_{den} ≤ 70	14600	-7859
70 < L_{den} ≤ 75	5200	-4361
$L_{den} > 75$	0	0
Total	128000	-48518

Classes do indicador Indicator classes [dB(A)]	Nº estimado de pessoas residentes Estimated n.º of residents	
	2016	2021-2016
45 < L_n ≤ 50	63800	2588
50 < L_n ≤ 55	48800	-20436
55 < L_n ≤ 60	16200	-8380
60 < L_n ≤ 65	5600	-4290
65 < L_n ≤ 70	200	-200
$L_n > 70$	0	0
Total	134600	-30718

Tabela 8 - Quadro comparativo de níveis sonoros nas estações de monitorização, 2021/2016

MAPA ESTRATÉGICO DE RUÍDO 2021 (RNT) – STRATEGIC NOISE MAP 2021
Aeroporto Lisboa | Lisbon Airport – Humberto Delgado (AHD)

Table 8 - Comparative table of sound levels at monitoring stations, 2021/2016

Estação de Monitorização Monitoring Station	Valores medidos em 2016 Values measured in 2016		Diferencial 2021 - 2016 Difference between 2021 - 2016	
	L_{den} [dB(A)]	L_n [dB(A)]	L_{den} [dB(A)]	L_n [dB(A)]
(1) Pirescoxe	51,6	59,8	-6,5	-5,8
(2) Alcântara	56,0	64,2	-5,5	-5,9
(3) Camarate	61,4	69,4	-4,3	-4,0
(4) Campolide	57,9	65,6	-4,0	-3,6
(5) Cidade Universitária	62,9	70,4	-3,8	-3,3
(7) Aeroporto	61,3	70	-3,1	-3,4
Média Average			-4,5	-4,3

De uma maneira geral, da análise comparativa da informação entre 2021/2016, observou-se uma diminuição dos movimentos de aeronaves ocorridos. Esta diminuição resultou em grande medida dos efeitos associados com a pandemia COVID-19 que, embora com recuperação em 2021, ainda se fez sentir ao nível do tráfego ocorrido.

Verificou-se também um decréscimo significativo da exposição da população ao ruído: um total de cerca de 22000 residentes expostos a $L_n > 55$ dB(A) em 2016 passou para 9130 residentes em 2021 (menos 12870 residentes sobre-expostos).

In general, from the comparative analysis of the information between 2021/2016, a decrease in aircraft movements was observed. This decrease was largely resulted from the effects associated with the COVID-19 pandemic which, although showing signs of recovery in 2021, was still felt in terms of the level of occurred traffic.

There was also a significant decrease in the population's exposure to noise: a total of about 22000 residents exposed to $L_n > 55$ dB(A) in 2016 dropped to 9130 residents in 2021 (less 12870 over-exposed residents).

MAPA ESTRATÉGICO DE RUÍDO 2021 (RNT) – STRATEGIC NOISE MAP 2021

Aeroporto Lisboa | Lisbon Airport – Humberto Delgado (AHD)

Tal diminuição ficou a dever-se a um menor número de movimentos (menor número de tráfego) em 2021 [estima-se uma redução associada de cerca de -2 dB, assumindo uma variação típica de $10\log(n)$] mas também devido a um aumento progressivo de operações de aeronaves mais recentes, de tipologia NEO, que vêm introduzir melhorias ao nível das emissões de ruído, e que, em conjunto com a redução de tráfego, conduziu a uma redução global média nas estações de monitorização de ruído de cerca de -4 dB.

This decrease was due to a lower number of movements (lower number of traffic) in 2021 [an associated reduction of around -2 dB is estimated, assuming a typical variation of $10\log(n)$] but also due to a progressive increase in operations with more recent aircraft, of the NEO type, which introduce improvements in terms of noise emissions, and which, together with the reduction in traffic, led to an overall average reduction in Noise Monitoring Terminals of around -4 dB.

MAPA ESTRATÉGICO DE RUÍDO 2021 – STRATEGIC NOISE MAP 2021 (AHD LISBON)

LPPT AD 2.21 NOISE ABATEMENT PROCEDURES

1. GENERAL

Landing and/or take-off is forbidden by law between 00:00 (23:00) and 06:00 (05:00), except in cases of force majeure. However, according to governmental deliberation, exception regime has been granted for Lisboa Airport in which landing and/or take-off of aircraft engaged in commercial aviation or aerial work are allowed in a limited number

The authorisation for air movements during this period is conditioned to:

1. The number of movements per week, shall not exceed a total limit of 91.
2. In any case the number of air movements per night period (NP) shall not exceed the double of the daily movements in which

NP=	Limit per week Number of days of the week
-----	--

3. The authorization for the air movements during the night period is also conditioned to the noise levels of the aircraft concerned, under the provisions of the items below.
4. For the purposes of effective perceived noise levels established by ICAO, aircraft are classified as follows

Level 0	below 87 EPNdB
Level 0,5	between 87 and 89.9 EPNdB
Level 1	between 90 and 92.9 EPNdB
Level 2	between 93 and 95.9 EPNdB
Level 4	between 96 and 98.9 EPNdB
Level 8	between 99 and 101.9 EPNdB
Level 16	above 101.9 EPNdB

5. The noise level classification of an aircraft either at landing or at take-off is given by the values indicated in the aircraft manufacturer's noise certificate, taking into account the reference points specified in the technical standards applicable to the approach to landing, overflight for take-off and sideline procedures, at full power.
6. Without prejudice to provisions of article 7 and 8 of Decreto-Lei nº. 293/2003 of 19 November 2003, on the exemption of aircraft registered in the developing countries and applicability of an exemption to the operation of aircraft under exceptional circumstances, respectively, the aircraft to operate in the night air movements allowed during this period shall comply with the following requirements:
The aircraft classified in levels 8 and 16 cannot be scheduled for the night period;
The aircraft classified in level 4 cannot be scheduled to take-off during night period on regular air services;
The aircraft classified in level 2 can be scheduled to take-off between 00:00 (23:00) and 00:30 (23:30) as well as from 05:00 (04:00) thereon;
The aircraft classified in levels 0, 0.5 and 1 are not subject to restrictions.
7. The aircraft falling into the criteria set out in 5- of this number authorized to land during the night period are forbidden to reverse thrust, right after landing.

2. The following approach procedures are established to reduce noise level in the city by over flying aircraft.

Visual Approach Procedures

MAPA ESTRATÉGICO DE RUÍDO 2021 – STRATEGIC NOISE MAP 2021 (AHD LISBON)

From the South to:

RWY 02: The descent to final approach altitude will be done over the river and maintained until the aircraft is aligned with runway (the city will only be over flown on final and when lined up with runway).

RWY 20: The descent to final approach altitude should be made over the river and maintained on the left down wind sea until the aircraft is aligned with runway.

From the North to:

RWY 20 - No restrictions

RWY 02 - Left-hand traffic circuit

Final approaches for landing shall be carried out at an angle of not less than 3º and the indicated approach slope of the PAPI shall be followed for each runway.

Flat approaches flown with relatively high engine thrust at low altitude and great distance from airport are prohibited.

SID's are also established in accordance with Noise Abatement criteria (see [AD 1.1 - 1.1.5](#)).

Local flights

Local flights (test, training, etc.) with successive take-offs and landings are only permitted between 08:00/22:00 (07:00-21:00) and only if the operator has an open bank account with Lisboa Airport.

1.1.5 OTHER INFORMATION

Noise abatement procedures

General

The following procedures may at any time be departed from to the extent necessary for avoiding immediate danger. Every operator of aircraft using the airport, shall ensure at all times that aircraft are operated in a manner calculated to cause the least disturbance practicable in areas surrounding the airport.

Departures

For aircraft licensed in accordance with ICAO ANNEX 16, Chapter 2:

TAKE - OFF TO 1500 FT AGL	TAKE - OFF POWER
	TAKE - OFF FLAPS

MAPA ESTRATÉGICO DE RUÍDO 2021 – STRATEGIC NOISE MAP 2021 (AHD LISBON)

	CLIMB AT V2 + 10 KT (OR AS LIMITED BY BODY ANGLE)
AT 1500 FT AGL	REDUCE POWER TO NOT LESS THAN CLIMB POWER
1500 FT - 3000 FT AGL.	CLIMB AT V2 + 10 KT
AT 3000 FT AGL	NORMAL SPEED AND FLAP RETRACTION SCHEDULES TO ENROUTE CLIMB

For aircraft licensed in accordance with ANNEX 16, Chapter 3 as well as B737 - 200 as far as the noise levels for take - off pursuant to ICAO ANNEX 16, Chapter 3 have provably been reached by supplementary equipment:

TAKE - OFF TO 1000 FT AGL	TAKE - OFF POWER TAKE - OFF FLAPS CLIMB AT V2 + 10KT (OR AS LIMITED BY BODY ANGLE)
At 1000 FT AGL	Maintaining a positive Rate of climb, accelerate to zero flap minimum safe manoeuvring speed (Vzf) retracting flap on schedule;
	Thereafter reduce thrust consistent with the following: a) For high by-pass ratio engines reduce to normal climb power/thrust; b) for low by-pass ratio engines, reduce power/thrust to below normal climb thrust but not less than that necessary to maintain the final take-off engine-out climb gradient; and c) for aeroplanes with slow flap retracting reduce power / thrust at an intermediate flap setting.
1000 FT - 3000 FT AGL	Continue climb at not greater than Vzf + 10 KT

MAPA ESTRATÉGICO DE RUÍDO 2021 – STRATEGIC NOISE MAP 2021 (AHD LISBON)

AT 3000 FT AGL	Accelerate smoothly to en route climb speed.
-------------------	--

Note: Aeroplanes such as supersonic aeroplanes not using wing flaps for take-off should reduce thrust before attaining 1000 FT but not lower than 500 FT.

ANEXO 4 – DESENHOS DOS MAPAS DE RUÍDO

Nas páginas seguintes constam os seguintes Desenhos:

Des A1: Mapa de Ruído para o indicador L_{den} (Global; escala 1:100000)

Des A2.1: Mapa de Ruído para o indicador L_{den} (Parte 1/15 (norte); escala 1:10000)

...

Des A2.15: Mapa de Ruído para o indicador L_{den} (Parte 15/15 (sul); escala 1:10000)

Des B1: Mapa de Ruído para o indicador L_n (Global; escala 1:100000)

Des B2.1: Mapa de Ruído para o indicador L_n (Parte 1/15 (norte); escala 1:10000)

...

Des B2.15: Mapa de Ruído para o indicador L_n (Parte 15/15 (sul); escala 1:10000)

Des C1: Abrangência da Isófona 63 L_{den} (Parte 01/01; escala 1:50000)

Des C2: Abrangência da Isófona 53 L_n (Parte 01/01; escala 1:50000)

ANNEX 4 - NOISE MAPS DRAWINGS

The following drawings appear on the following pages:

Des A1: Noise map for the L_{den} indicator (Global; scale 1:100000)

Des A2.1: Noise map for the L_{den} indicator (Part 1/15 (north); scale 1:10000)

...

Des A2.15: Noise map for the L_{den} indicator (Part 15/15 (south); scale 1:10000)

Des B1: Noise map for the L_n indicator (Global; scale 1:100000)

Des B2.1: Noise map for the L_n indicator (Part 1/10 (north); scale 1:10000)

...

Des B2.15: Noise map for the L_n indicator (Part 15/15 (south); scale 1:10000)

Des C1: Range of contour line 63 L_{den} (Part 01/01; scale 1:50000)

Des C2: Range of contour line 53 L_n (Part 01/01; scale 1:50000)
