

Óleos Lubrificantes Usados – versão 1

A APA, I. P., publicita os resultados de gestão alcançados a nível nacional para cada fluxo específico de resíduos, até cinco dias úteis após a validação pela Comissão Europeia do reporte previsto, de acordo com o n.º 5, do artigo 97.ºA do [UNILEX](#).

As tabelas infra demonstram o resumo do reporte comunitário efetuado em 2025 relativamente a 2023. Este documento apresenta a primeira versão dos dados submetidos. Os campos da tabela foram preenchidos de acordo com as regras da [Decisão de Execução \(UE\) 2019/1004 da Comissão](#) e o documento "[Guidance for the compilation and reporting of data on the placing on the market of mineral and synthetic lubrication and industrial oils and on the treatment of waste oils as required by the Commission Implementing Decision \(EU\) 2019/1004, Annex VI](#)" (versão 21 de maio de 2023).

Nota: Os dados apresentados correspondem ao universo de operadores da rede da entidade gestora Sogilub e de outros operadores não Sogilub no que respeita aos códigos LER indicados no Guia da Comissão que não estão no âmbito da atividade da Sogilub. Ao contrário do ano de 2021, para 2022 e 2023 considerou-se que o tratamento de óleos usados que resulta em produção de combustível realizado por operadores licenciados para operação R9 é contabilizado em "Other recycling" e não "Energy recovery"¹² (R1)".

Tabela 1 - Comunicação de dados sobre a colocação no mercado de lubrificantes minerais ou sintéticos e de óleos industriais e sobre o tratamento de óleos usados

	1		2		3				4				5			
	Oils placed on the market ⁵		Waste oil generated ⁶ (dry oil)		Separately collected ⁷ waste oils				Exported ⁸ waste oils				Imported ⁹ waste oils

White: Data provision is mandatory.

Grey: The calculation of data is automatic. The cell can be edited after unlocking the cell with the button "Unlock formulas".

Beige: Footnotes (only to be filled-in when relevant)

Black: Not applicable.

Commission notes:

¹ Including engine oils and gear oils (automotive, aviation, marine, industrial and other sectors); excluding greases and bilge oils.

² Including machine oils, hydraulic oils, oils for turbines, transformer oils, heat transmission oils, compressor oils, base oils; excluding greases and oils used for emulsions.

³ Including metal working oils; in case national reporting does not distinguish industrial oils used in emulsions or otherwise, aggregated data on industrial oils may be provided and shall be specified in row 'industrial oils'.

⁴ Only waste oils under code 190207* of Decision 2000/532/EC.

⁵ Oils placed on the market in a Member State taking into account export losses (e.g. export of passenger cars) and import gains (e.g. imports of passenger cars).

⁶ Amount of waste oils taking into account handling losses and losses during use. Amounts of waste oil generated may be calculated based on national statistics or by using the reference values listed in Table 4.

⁷ Waste oils separately collected. In case collected waste oils are quantified by volume, the corresponding mass is determined by applying a conversion factor of 0,9 tonnes/m³.

⁸ Waste oil exported to another country (considering the waste categories set out in Regulation (EC) No 1013/2006).

⁹ Waste oil generated in another country and imported from that country (considering the waste categories set out in Regulation (EC) No 1013/2006).

¹⁰⁻¹³ Amounts reported shall relate to the waste oil separately collected. The sum of the values for dry oil in columns 6 to 9 should be equal to the sum of the values for dry oil in column 3 adjusted for exported and imported waste oils (column 3 – column 4 + column 5 = column 6 + column 7 + column 8 + column 9).

¹¹ Recycling other than regeneration, e.g. as flux oil.

¹² Including use of recovered oils as fuel, in accordance with the definition of recovery in Article 3(15) of Directive 2008/98/EC.

¹³ Disposal operation D10 Incineration on land as laid down in Annex I of Directive 2008/98/EC.

¹⁴ Waste oil excluding water content. The dry oil content is determined by measuring the water content. For waste oils other than emulsions, the dry content may alternatively be determined on the basis of a water content of 8 %. For dry oil in emulsions of industrial oils the dry content may alternatively be determined on the basis of a water content of 90 %.

Tabela 2 - Comunicação de dados sobre o tratamento de óleos usados

1	2		3		4		5	
Type of output from recovery	Regeneration ¹		Other recycling		Energy recovery or reprocessing into materials that are to be used as fuels (including regenerated oils used as fuel)		Disposal (D10)	
	(t)	Explanatory footnote	(t)	Explanatory footnote	(t)	Explanatory footnote	(t)	Explanatory footnote
Regenerated base oil – group I ^{2, 3}	13113,5	7						
Regenerated base oil – group II ⁴	0							
Regenerated base oil – group III ⁵	0							
Regenerated base oil – group IV ⁶	0							
Recycled products ⁷ (specify)			2276,02	11				
Fuel products for off-site energy recovery – Light fuel oil								
Fuel products for off-site energy recovery – Distillate fuel oil								
Fuel products for off-site energy recovery – Heavy fuel oil								
Fuel products for off-site energy recovery – Recovered fuel oil								
Fuel products for off-site energy recovery – Processed fuel oil								
On-site energy recovery ⁸								
Other					1068,79		981,59	
Mix of hazardous waste for co-incineration					54,54	12		

Sludges from physico-chemical treatment containing hazardous substances					1014,25	15		
---	--	--	--	--	---------	----	--	--

White: Data provision is required.
Light blue: Reporting is voluntary.
Beige: Footnotes (only to be filled-in when relevant)
Black: Reporting is not applicable.
Grey: The calculation of data is automatic. The cell can be edited after unlocking the cell with the button "Unlock formulas".

Commission notes:

¹ Amount of regenerated oils. The sum of the entries in Column 2 of table 2 divided by the sum of the entries in column 6 of Table 1 corresponds to the conversion efficiency of oil regeneration.

² Base oil group I contains less than 90 % saturates and/or more than 0,03 % sulphur and has a viscosity index greater than or equal to 80 and less than 120.

³ In case national reporting does not distinguish groups I-IV, aggregated data on regenerated base oils may be provided and shall be specified in row 'Other'.

⁴ Base oil group II contains more than or equal to 90 % saturates and less than or equal to 0,03 % sulphur and has a viscosity index greater than or equal to 80 and less than 120.

⁵ Base oil group III contains more than or equal to 90 % saturates and less than or equal to 0,03 % sulphur and has a viscosity index greater than or equal to 120.

⁶ Base oil group IV are polyalphaolefins. Base oil not included in groups I-IV shall be specified in row 'Other'.

⁷ Includes recycled products from other recycling of waste oils reported under column 7 of Table 1.

⁸ On-site energy recovery means recovery of waste oils through internal energy consumption e.g. in a refinery.

Explanatory footnotes:

1 Data included in 'industrial oils' (cell above).
2 Dry content determined on the basis of a water content of 8 %.
3 Uncertainty. Waste classified with LoW code 190207 might not have oils in its composition but other hydrocarbons so it was no considered.
4 When no information is available from the operator, dry content is determined on the basis of a water content of 90%. Here are quantified fuels products from waste oil treatment produced by operators that have permit for R9 operation (and not R1) even though it concerns fuel production. The output of the waste oil treatment R9 is a product, not classified as waste.
5 Here are quantified waste oils used as a blowing agent in the production of expanded clay. Also, here are quantified fuels products from waste oil treatment produced by operators that have permit for R9 operation (and not R1) even though it concerns fuel production. The output of the waste oil treatment R9 is a product and not classified as waste.
6 Footnote deleted
7 Yield of 60%.
8 No information to allow presentation of an estimate.
9 Regarding LER codes out of the scope of the collective system (mentioned in question 3 of the quality report), there is no sources of information for calculation of the correspondent waste oil generated so in here is presented information regarding only waste of the scope of the collective system.
10 footnote deleted
11 No information about yield of the recycling in the expanded clay production so it is not accounted here. Here are quantified fuels products from waste oil treatment produced by operators that have permit for R9 operation (and not R1) even though it concerns fuel production. The output of the waste oil treatment R9 is a product, not classified as waste.
12 Mix of hazardous waste for co-incineration - LoW code 191211*. This waste is accounted in 'energy recovery' in table 1.
13 It includes the total amount of oils previously treated in another facility that removes water and only the recoverable fraction is sent to the cement plant.
14 Includes sludges and residues for stabilization from physico-chemical treatment - LoW 190205* - sent to D1 landfill.
15 Sludges from physico-chemical treatment containing hazardous substances - LoW 190205*. This waste is accounted in 'energy recovery' in table 1.
